PROMIS Caroline 2024

Network tutorial

Customer specifications

Explain how to install a network of 4 virtual machines with software
in English
For a beginner, illustrate with photos

Skills

- Simple and effective explanations, including potential errors
- Written entirely in English
- Installation of functional virtual network for a company

Network project

This tutorial will teach you how to virtually create a network for a company, by connecting 4 machines together and settling them up with useful softwares for employees. You will use your computer as an administrator one, because it will be used to store, launch and set up your virtual network.
